## **water management system**

### Product Description:

The installation of a water management system is an excellent and cost effective way of significantly reducing your water bill.

The system has an inbuilt micro processor linked to a PIR unit which senses when the urinal is used then time the flush to ensure optimum hygiene of your washroom while not wasting costly water.

When the urinal is not in use the system goes to sleep mode and will flush only once every 12 hours as part of its 'hygiene' cycle.

### Key Features & Options:

- Saves upto 80% on your water costs.
- Hygienic and efficient with inbuilt microprocessor and PIR detector.
- Fitted discreetly next to water cistern or ceiling.
- Works in conjunction with our auto sanitising system.
- Fully installed by our trained engineers.
- Stand alone unit, requires no electrical connection.
